

PURSANOVA

PursaLex™

Electrically heated or solar heated water is said to be **not suitable for drinking water.**

BEFORE PursaLex

Scaling and slime build up of 16 years

Red rust adhered to the heater section (heater is used for 16 years)

Heated water from the drain outlet: impurities come out toward the end

AFTER PursaLex

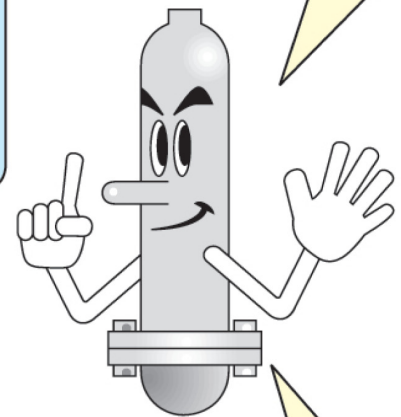

Water tank bottom 2 weeks after installation

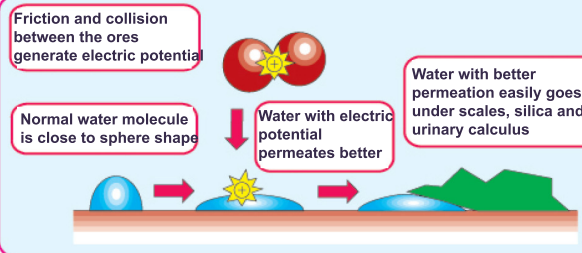

Heater section 2 weeks after installation

Water heater that is used for more than 15 years usually have slime build up and red rust adhered to the heater section.

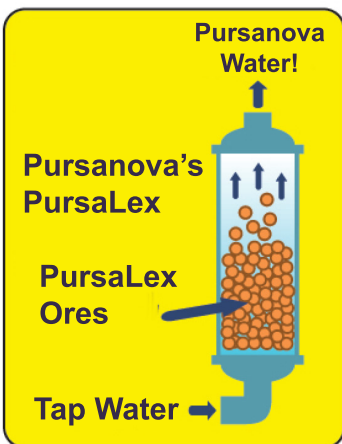

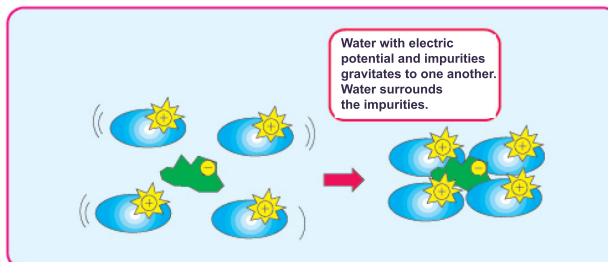

PursaLex installation will remove impurities inside the water heater tank, which is a cause of bacteria. This is a clean and safe water environment.

How do impurities remove?

How does it remain clean?

Water flow causes collision and friction between the ores generating a faint electric potential which energizes water
